Patent No. 616678

GENERAL INFORMATION:
APPLICANT: Cach, Thomas R.
APPLICANT: Ingner, Joachim
APPLICANT: Nakamura, Toru
APPLICANT: Applicant, Raren B.
APPLICANT: Harley, Calvin B.
APPLICANT: Harley, Calvin B.
APPLICANT: Harley, Calvin B.
APPLICANT: Andrews, William H.
TITLE OF INVENTION: Human Telomerase Catalytic Subunit
CORRESPONDENCE ADDRESS: 727
ADDRESSEE: Townsend and Townsend and Crew LLP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            COMPUTER READABLE FORM:

Sequence 5, Application US/08264534

Patent No. 5648464

GENERAL INFORMATION:
APPLICANT: Artavanis-Tsakonas, Spyridon et al.
TITLE OF INVENTION: Human No. 5648464ch And Delta, Binding Domains
TITLE OF INVENTION: In Toporythmic Proteins, And Methods Based Thereon
NUMBER OF SEQUENCES:
ADDRESSEE: Pennie & Edmonds
STREET: 1155 Avenue of the Americas
CITTY: New York
STATE: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     823 CCAAATGAATGTCCCATTACAGCCACACGGCTCACGTCAATGCCGCCCTTCAAGGTCATC 764

Sequence 1, Application US/08081590A
Patent No. 5786158
RENERAL INFORMATION:
APPLICANT: Arravanis-Tsakonas, S. et al.
TITLE OF INVENTION: Therapeutic And Diagnostic Methods
TITLE OF INVENTION: And Compositions Based On No. 5786158ch Proteins And
TITLE OF INVENTION: Nucleic Acids
                                                                                                                                                                                                                                                                                                                                                                                                                                               -----recrecerceacrecedered 278

SERENTI INFORMATION:
APPLICANT: Blokeberg, Leonard N.
TITLE OF INVENTION: Materials and Methods for the TITLE OF INVENTION: Materials and Methods for the TITLE OF INVENTION: Modification of Plant Lignin Content; TITLE OF INVENTION: Modification of Plant Lignin Content; TILE REFERENCE: 11000.1003c40
CURRENT APPLICATION NUMBER: US 08/975,316
PRIOR APPLICATION NUMBER: US 08/975,316
PRIOR FILING DATE: 1999-11-21
PRIOR FILING DATE: 1999-11-21
PRIOR PRILICATION NUMBER: US 09/13,000
PRIOR PLING DATE: 1999-10-09
PRIOR PLING DATE: 1999-10-09
NUMBER OF SEQ ID NOS: 405
SOFTWARE: FastSEQ for Windows Version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -----LysAspThrAspCys----

/lab_host="DH10B (phage-resistant)"
/lab_host="DH10B (phage-resistant)"
/note="Organ: lung; Vector: pT713D-Pac (Pharmacia) with a modified polylinker; lst strand cDNA was prepared from pooled lung tunor tissue, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to con R adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT713 vector. Library went through one round of
profiles into the DUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under tow stringency conditions."
